

7  
Gilden. 1620.

A  
New Almanacke,  
and Prognostication,  
for the yeare of our  
LORD GOD,

1620.

*Being bissextile or Leape-yeare.*

Calculated and composed  
according to Arte, for the  
Latitude and Meridian of the  
Towne of Shipton vpon Stowre,  
in the County of Worcester.

And may well serue for all the  
South parts of great Brittain.

BY

G. Gilden φιλομαθης.

*Ludit in humanis diuina potentiarebus.*

LONDON:

Printed for the company of

Stationers.

Common Notes of moueable feasts according  
to the old accompt vsed in England.

## To the Reader.

**H**onorable Reader, seeing that yearly Almanacks & Prognostications are usually published for the behalfe of common people, I haue thought fit (for their better vnderstanding) to bee as plaine therein as I might, and therefore haue written little int his Almanacke & Astronomicall Tables, but what with small paines (euen of the simplest) may easily be vnderstood. Yet seeing that the predictions of the weathers dispose, are commonly by the common sort taxed of vntruth, I haue (as formerly) thought good onely to set downe the Aspects of the Moone, and the rest of the Planets for the iudicious to find out of themselues, which being reduced into 12. Columes for the seuerall Months, I haue set them in my Prognostication, seeing the table annexed is much pertinent therto: For the better vnderstanding whereof, and the like Tables, if any bee desirous so to enrich his vnderstanding with Mathematicall knowledge, he shall find the workes both of ancient and moderne Writers so plentifully, as that there were neuer better or neerer helps for the attaining thereof, then are at this present; as may well be proued by those excellent workes and Inuentions, that

To the Reader.

*haue lately beene published, namely the admirable Table of Logarithmes, inuented and published by that Honorable Lord Iohn Nepair, Barron of Marchiston: And the excellent Table called the Arithmetticall Iewell, inuented by Mr. William Pratt, who teach the vse thereof heere in this City of London: Which Iewells are made by Mr. Robert Limborough at his house in the lower end of Gutter-lane neere Gold-smiths Hall. And for all other sorts of Mathematicall Instruments, they are very exactly made in Copper by Mr. Elias Allen, at his house ouer against St. Clements Church without Temple-bar: And in Wood, by my very good friend Maister Iohn Thomson, at his house in Holier-lane neere West-Smithfield. Whereupon I conclude, that the attayning of these excellent Artes, is now farre easier, then at any time in former ages they haue beene. And so for this time, I bid thee farewell.*

*Thine, G. Gilden.*

---

Of

---

A Declaration of the Disposition of the  
*Foure Quarters of the Yeare.*

Of Winter.

**W**inter the first quarter Astronomicall, began the last yere xi. day of December, when the archflame of light being in his greatest digression from the Equator to the south, and scited in the Tropicall point of  $\gamma\gamma$ , bringeth diuers ympediments euident in nature, which bereaueth our Septentrionall parts of the heat and vigor, wherewith at other times the sunne being nearer, and moze elcuated, doth pzeferue & cherish the elements, and all thinges composed of them, whether vegitable oz sensatiue. So as now commeth cold & darknes to vs on this Northerne part of the Equator, but the most pleasant, and comfortable time of sommer to the Inhabitants nere the south Pole, viz. Nova Guinea, Chaldi, Terra del Fuego, &c.

In this byrmaill quarter it is good to drinke little & eate well, because at this time mans stomacke being hot, is aptest to digest. The diseases incident to this quarter, are pusles in the face, Leprosie, tooth-ach, red spots, Fevers, the scab, Fluxes of blood in the inferior parts, paine of the eyes, Palsies, Gouts, and such like,

## A Prognostication.

### Of the Spring.

**T**he Spring (according to Astronomical computation) beginneth when the sun enters into the dodecatemory of  $\gamma$ , or point of interfection of the Eclipticke & Equator, whereupon are grounded the generall predictions of the whole yeere succedent, as the radical or genethliacall resolution therof, hapning this present yeere the x. day of March, hauing then prouolued himselfe to the punctuall interfection of the vernal Equinoctiall. By which equall vicissitude of night & day, the world thereby for that time hath the fruition of his splendent raies, most gratefull to the dwellers within  $\frac{1}{2}$  temperate Zone, as Europe is. But ouer feruent & parching heat to the Inhabitants nere the Line in the Torrid Zone, as the most part of Africa, and East Indies, with the spicery Isles, & also to new Spaine.

This quarter is most comfortable of all the yeere, and of nature warme & moist, yet the ordinary diseases thereof, are Leprosies, red spots, Tooth-ach, Feuers of bloud, pushes, or wheales in the face, small Pox, ring-wozmes, falling sickness, paines in the throat & necke, the Kings e-mill, Swens & griefes in the shoulders & armes caused by bloud, fainting & Phrensies.

### Of Summer,

**V**hereas the continuance of action doth necessarily ad force of operation to all naturall agents: And asit commeth to passe in Winter, that by reason of the Suns remote position that his continuance aboue the Horizon, is shorrest, and his absence vnder the same longest, thereby causing the shorrest dayes & longest nights. So now in Summer, which Quarter beginneth when faire Phoebus hauing arined to the highest pitch of eleuation in our Horizon, by his farthest obliquation to the North, hee produceth the longest day and shorrest night in the yeere, which will happen on the 11. of June. This quarter is hot & dry in nature, and doth so accordingly alter the humors in mans body.

The

Gilden. 1620.

The sicknesses agreeing to the nature thereof, are griefes & torments about the breast, ribs & spleene, pusses, Leprosie, and diseases of the face (as in the spring) beards and soze eyes, with other impediments therein, the plurisie, Chough, hart & stomach aking, sorrows, vexations, Feuers of blood, Apostumes, Pestilence, the Jaundise, paine in the belly & secrets parts, with other infirmities proceeding of Melancholy.

Of Autumne.

The Sunne having entred in  $\cap$ . the other Equinoctial Dodecatemorie, maketh equall arches of Sun-thine on the surface of this Globe of Mortality, producing a second Spring, which falleth out on this yeere, on the 13. day of September: And this Quarter is by nature cold and dry.

The diseases therof, are properly paines in the backe, darknes of sight, retention of urine, fluxes of blood, paines in the priuy parts, with infirmities in the face, also the Canker, Fistuloes, Emroides, the Stone & gravell, feuers of blood, and impediments in the eyes.

The Disposition of the Ayre, in more particular.

FOR as much as I have noted the Aspects of the Sun and Planets amongst themselves, against every day of the Month in these 12. Columns following. I thought it would be no lesse convenient, then if setting down the daily dispose of the weather, I shall by a Table immediately following the said Columns shew how by those Aspects, you may know the alteration of the weather, whereby you may conceiue, that if by the Table alone you may come neere to know the change of the weather, the whole Art is not so vaine, as it is accompted, but availeth to the knowledge of much truth.

# A Prognostication.

Note

Gilden. 1620.

Note that euery King began his Raigne, the same time that the next precedent King ended his.

The vse of the former Table.

If you desire to know how long it is since the beginning of the Raigne of any King, looke how long it is since the ending of the precedent King, and you shall haue your request.

Example.

I would know when King Henry the Eight began his Raigne, how long he Raigned, and also now how long it is since the ending of his Raigne.

First I find out his name among the Kings names, and looking along the row toward the Right hand, you shall find that he began his raigne in the yeare 1509. the 22. of Aprill, and vnder the Title, (the time they reigned) there is 37 yeeres, 10 Months, and 2 daies: And looking forward in the same row, where is 73 yeeres, January 28. vnder the title of (The time since they Raigned) And so long it is since he died,

## A Prognostication.

**A Table to know when the  
Moone will be South for  
euery day of the yeare.**

The age of the Moone before full.	Her comming to South.		The age of the Moone after full.
Dayes.	Hou:	Min:	Dayes.
1	12	48	16
2	1	36	17
3	2	24	18
4	3	12	19
5	4	0	20
6	4	48	21
7	5	36	22
8	6	24	23
9	7	12	24
10	8	0	25
11	8	48	26
12	9	36	27
13	10	24	28
14	11	12	29
15	12	0	30

From the change to  
full, the Moone  
comes to the South  
after noone.

From the full to the  
change, the Moone  
comes to the South  
before noone.

The age of the Moone being found in the Kalender (that is) how many daies is past fro the time of her change: Therewith enter this Table, & having found it in the first Colu- me to the left hand, if it be before the full Moone: Di to the right hand, if it be after full moon. You shall haue in the middle colu- me her com- ming to the south, be- fore, or after, as is no- ted at the foot of the Table.

As for example.  
The first day of Jan: the moone is 7. daies old, wherwith enter this table in the first co- lume to the left hand. Quer against it I find 5. and 36. shewing me her comming to south, to be at 36. minuts past 5 a clocke before noone.

To know the hower of the night by  
the Moone on any Sun-Dyall.

The time of the Moones comming to South being found in the former table, in manner aforesaid, looke in a Sun-dyall, vpon what houre before or after 12. on the Dyall the Moones shadow falleth: for so many hou: it is before or after the Moones comming to the south.

Example.

I find the Moones comming to south the aforesaid first of Jan: to

Gilden. 1620.

to be at 5. and 36. min: afternoone, looking on a Sun-dyall,  
I find her shadow to fall the 3 hou: after 12. on the Dyall  
whereupon I conclude it is 3 houre, and 36. min. after 5  
a clocke at night, which was her coming to ½ south, and  
therfoze it is 8 a clocke, and 36 min: at night.

Of

Gilden. 1620.

Of the Eclipses this present yeare,  
1620.

**T**his yeare 1620. will there be (though not all visible in these our parts) 5 Eclipses of the sun & Moone. Namely 3. of the sun, & 2 of the Moone, wherof onely thole 2 of the Moone will appeare in this our Horizon. And the rest of the sunne in Countreies far remote, and therefore are needlesse of any great obseruation in this place.

The first of the Sun will happen on the 21 day of May, according to the old account, and on the 1. of June according to the new, being visible to the Inhabitants of the Septentrionell part of the Earth, beyond the Arctick Circle.

The second of the sun hapning on the 19 day of June of the Julian yeare, but the 29 of the same Month of the Lillian yeare will be seene in Terra Magellanica. But not visible in our Horizon.

The third Eclipse of the sun, will appeare likewise in Terra Magellanica, the 13 of November according to the old stile, and the 23. according to the new, on which day the Inhabitants of those parts shall behold the sun eclipsed. But in our Horizon will not be perceived. What the signification of these may import (being not seene heere) I leaue to those, to whom the clinet of these accidents are proper.

Of the Eclipses of the Moone.

**T**his yeare 1620. in this our Horizon, will be visible two great Eclipses of the Moone. The first hapning on the 5. day of June, according to our account being Sun day, at 35 min past 12. a clocke in the morning, when being at her greatest obscuration, she will be eclipsed 18. dig: and 18 min: her totall duration, being 4 hou. and 3 minuts.

The second Eclipse of the moone will happen & be seene in this our Horizon the 29. day of November, being wednesday at 5 a clocke, and 21 min: at night, and will be darkned to the quantity of 19 digits, she beginning to encrease her obscurity, at 3 a clocke & 27 min: and hauing wholly regained her brightness at 7 a clocke & 16 min: her whole duration will be 3 hours and 49 minuts.

Astronomi-

**Astronomical Elections for Physicke and Chyrurgery, depending on the place and course of the Moone.**

**VV** <sup>H</sup> <sup>E</sup> <sup>N</sup> thy body is filled with naughtie and superfluous humours, it is conuenient for thee to draw bloud, so the Heauens consent thereunto, and thy age agree therewith : which being not circumspectly weighed, it may be most dangerous to the Patient (whercof, no vnderstanding man is ignorant) but when necessity bygeth, as for the Pestilence, Plurisie, Phrensie, &c. then though the heauens deny, yet a vaine is speedily to be opened, ad xgri sa uitem. This considered, Of Medicines, some be Purgatiue, some comfortiue, and others in the meane betwixt both.

Medicines purgatiue, be either Soluendo or Leniendo : In the first, the Moone must be in ♄, m, or ♋. for the other, the Moone must be taken, when she worketh more in moistnesse, then drynesse, being in ♊ or ♎ with ♄. And you must take heede, in the houre of giuing the medicine, lest the ☿. haue any aspect with ♄, for he coniealeth the humours, making the medicine worke little.

Likewise let her be free, from any aspect with ♃, for he is the giuer of life, the helper & comforter of the vertues, so that the Medicine can but weakly expell the humours, making the body affected with an euill quality. Furthermore, in all Purgatiue Medicines obserue these ensuing rules : For in the administration of Physicke, are chiefly to be respected, three things, viz. the Time, the Age, and the manner of Administration.

I

C

For

## A Prognostication.

### For the time of the Year.

For the election of Time, consideration is to be had, that it be not in extremity, either of heate or cold: And therefore Hipocrat. Part. 6. and 46. Aphori. saith, that the Spring and Autumne are best for Physicke: and Summer and Winter bad, and to be vsed but vpon necessity. For in Sommer the humours boyle by reason of heate, causing great a annoyauce to mens bodies, yet if necessity bidge to take Physick in Sommer, it is best to take it by Vomits: And in Winter (if necessity require) by Purgation.

### For the time of the Moneth.

Let not blood be taken 3 or 4 dayes before, and after the conjunction of ♃, and ♄, the like of the conjunction of ♃, and ♅. Neither let blood, ♀ and ♁. being in conjunction, whilst ♀ is combust.

Let not blood be taken the day before and after the Full of the Moone: the like obserue, the Moone being in conjunction with ♄, or ♅.

But the Moone in any aspect, with ♃, or ♀, or in ☌, or ☊, with ☉, or ♄, produceth a very fit time to let blood.

### The time of the day.

The morning fasting is best, or in the evening after perfect digestion, with this proviso, that the Ayre be temperate, and the wind not South.

For

Gilden. 1620.

### For the Age.

Concerning the Age, you are to understand, that decrepit Old age, and yong Infants, are vnfit persons to haue Physicke administred vnto them, oz such as bee vnder 14. yeeres of age, and more then 56. yeeres old. Oz such as be exceeding fat, oz very leane. And it is also dangerous for a young man to take much Physick, for as a learned Physicion sayth, Hee that taketh much Physicke when hee is yong, will much repent it when hee is old.

### For the age to let blood.

In Youth, from the change, to the first quarter.

In Middle age, from the first quarter, to the full.

In Elder age, from the full, to the last quarter.

In Old age, from the last quarter, to the change.

And after bleeding vse no violent exercise, no sleeping, Vnery, oz gluttony.

### The manner of Administration.

For the manner of Physickes administration, Albucasis opinion is, That the fittest time for Purgations, are to be elected, according to the motion of the Moone, in watry signes, as G. vi. and X.

Others hold opinion, that the first halfe of A. and M. are fit times. And when the Moone is void of course, it is indifferent to take purgative Medicines.

C a

Moone

## A Prognostication.

$\text{D}$  in  $\text{S}$   $\left\{ \begin{array}{l} \text{not combust, is good to avoid Cholles} \\ \text{in } * \text{ or } \Delta \text{ } \left\{ \begin{array}{l} \text{is good to Purge Phlegme.} \\ \text{aspect of } \left\{ \begin{array}{l} \text{good to expell Melancholy,} \end{array} \right\} \end{array} \right. \end{array} \right\}$  with  
Electu-  
aries.

$\text{D}$  in  $\text{M}$  in  $*$   $\left\{ \begin{array}{l} \text{ } \end{array} \right\}$   
 $\text{or } \Delta$  aspect of  $\left\{ \begin{array}{l} \text{ } \end{array} \right\}$  good to Purge  $\left\{ \begin{array}{l} \text{Choler} \\ \text{Phlegme} \\ \text{Melancholy} \end{array} \right\}$  with  
potions.

The Moone  $\left\{ \begin{array}{l} \text{ } \end{array} \right\}$   
 in  $\text{K}$  in Sextile  $\left\{ \begin{array}{l} \text{ } \end{array} \right\}$  good to Purge  $\left\{ \begin{array}{l} \text{Choler} \\ \text{Phlegme} \\ \text{Melancholy} \end{array} \right\}$  with  
 $\text{or } \Delta$  aspect of  $\left\{ \begin{array}{l} \text{ } \end{array} \right\}$  pills

$\text{D}$  in  $\text{E}$   $\text{or}$   $\left\{ \begin{array}{l} \text{ } \end{array} \right\}$   
 $\text{in } *$   $\text{or}$   $\left\{ \begin{array}{l} \text{ } \end{array} \right\}$  good to purge  $\left\{ \begin{array}{l} \text{Choller} \\ \text{Phlegmy.} \\ \text{Melancholy} \end{array} \right\}$  with any  
 $\Delta$  with  $\left\{ \begin{array}{l} \text{ } \end{array} \right\}$  kind of me-  
dicine.

But note, that you must looke, that  $\text{P}$  be not combust,  
 and that the  $\text{S}$   $\square$ ,  $\text{or}$   $\text{S}$ , of  $\text{H}$ ,  $\text{U}$ ,  $\text{or}$   $\text{J}$ , either to the  $\text{D}$ ,  $\text{or}$   
 betwene themselves, doe not hinder the operation of  
 the Whisicke.

Neither let the Moone be in any of the signs, that doe  
 chaw the Cud, as  $\text{V}$ ,  $\text{S}$ ,  $\text{or}$   $\text{W}$ , for then the Medicine  
 will stay but a little with the patient, causing him to vo-  
 mit, vnilesse you intend to purge by vomiting. Also in  
 purging the Melancholy, let not  $\text{H}$  haue dominion, nor  
 $\text{U}$ , in purging the sanguine,  $\text{or}$  the Luer, nor Mars, the  
 Chollericke, nor Luna, the Head, nor  $\text{S}$ , in purging the  
 Lungs.

The moone being fortified it is ill to purge the braine.  
 In the Administration of Purgations remember Ha-  
 ly his Commentary on Ptolomy, who saith, That the  
 humours from the change of the Moone, to the first  
 quarter, and from the full to the last quarter, doe moue  
 from the inward parts of the body, to the outward, and  
 likewise, from the first quarter, to the Opposition, and  
also

also from the last quarter to the change, they moue from the outward parts to the inward.

Therefore in the first and third weekes of the Moone is best applying externall enacuations, and in the second and fourth weekes, internall purgations.

### How the Vertues be corroborated.

**T**he Vertues be either Vitall, Animall, or Naturall.

The Vitall vertues remaine in the Heart, The Animall in the Braine, and the Naturall in the Luer.

The Vitall vertues are gouerned of  $\odot$ , and  $\uparrow$ .

The Animall of  $\text{h}$ ,  $\text{f}$ , and  $\text{g}$ .

The Naturall, of  $\uparrow$ , and  $\text{f}$ .

Other vertues be also gouerned of the Planets, as the vertue Attractive is gouerned of  $\odot$ . The Digestive of  $\uparrow$ . The Retentive of  $\text{h}$ . The Expulsive of  $\text{f}$ .

Also the Signes, thus gouerne the vertues,  $\text{v}$ , and  $\text{t}$ , rule the Attractive.  $\text{ii}$ , and  $\text{z}$ , the Digestive.  $\text{g}$ , and  $\text{ny}$ , the Retentive.  $\text{s}$ , and  $\text{x}$ , the Expulsive.

Also the vertues be ruled by the Planets thus.  $\odot$ , the well-spring of the vertues Vitall.  $\text{f}$ , of the vertues Animall.  $\text{h}$ , of the Receptive.  $\uparrow$ , of the Augmentative.  $\text{g}$ , of the Attractive.  $\text{f}$ , of the Appetitive, and  $\text{g}$ , of the Imaginative.

Therefore when you would fortifie any of these vertues, fortifie the Planet, signifying the same, and it is done.

In letting of blood, you must know what persons are fit to bleed, and what not. And if they be fit, how it is with the patient inwardly for his Complexion & age, and outwardly for the time of the yeare, and of the Moone, as aforesaid.

For

## A Prognostication.

### For Complexion.

For the Phlegmaticke, let the  $\text{D}$ , be in  $\text{V}$ , or  $\text{I}$ , when you draw bloud. For the Melancholy in  $\text{II}$ , or  $\text{III}$ . For the Chollericke, in  $\text{S}$  or  $\text{X}$ . And for the Sanguine, in any of the aforesaid.

The vnaccustomed, are not to be Phlebotomized, least it breed some Malady, vnilesse necessity vrge it: And you must also haue respect to the strength of the person.

### Certaine Elections concerning Husbandry.

It is best to plant in the last quarter of the  $\text{D}$ . so that they be not aspected by  $\text{S}$ .  $\square$ . or  $\text{g}$ . of  $\text{h}$ . or  $\text{f}$ .

The  $\text{D}$  in  $\left\{ \begin{array}{c} \text{S} \\ \text{M} \\ \text{P} \\ \text{J} \end{array} \right\}$  Or in a good aspect of  $\left\{ \begin{array}{c} \text{h} \\ \text{V} \\ \text{g} \end{array} \right\}$  Are good times to plant or sow seeds.

Sow Corne when the Moone is in  $\text{S}$ .

Fell timber for building from Midsummer to Christmas in the wane of the Moone.

Seld or lib Cattle when the Moone is in  $\text{V}$ .  $\text{I}$ . or  $\text{II}$ .

Remoue Trees the last quarter of the  $\text{D}$ , betwene Vernaltide, and Twelfetide.

The later Writers of Husbandry doe report, that the seeds

Gilden. 1620.

Seeds of tender Herbs committed to the earth in an apt time, the Moon being in her first quarter, do more speedily shoot vp, then otherwise, especially being sown after show-  
ers of raine, on sunny & warme places, with obseruation that the Wind bloweth not from the North at the time of their sowing. And though the ancient writers of husbandry haue prescribed proper months & daies for the sowing of seeds, yet may enery man obserue their owne Rules, according to the nature of the place, and ayre, where they are to be sown: So that they consider also, that there bee some seeds, that by nature, do spring vp faster then others.

*Soli Deo decus & gloria. Amen.*

FINIS.
